OPENREMOTE RUNNING ON QNAP - CEDIA DENVER 2013

OpenRemote is the open source middleware solution for the internet of things. Whether creating a residential automation project, building automation or automation in the public domain, OpenRemote will do the job. OpenRemote integrates a wide range of protocols and devices. It offers cloud based visualization and automation tools, and allows you to design your own personal user interfaces.

QNAP Systems, aims to deliver comprehensive offerings of cutting edge network attached storage (NAS) and network video recorder (NVR) solutions featured with ease-of-use, robust operation, large storage capacity, and trustworthy reliability.

OpenRemote and QNAP now offer a powerful combination to installers and integrators with maximum flexibility to realize any project you could imagine.

QNAP APP CENTER

OpenRemote Free Designer is available in the QNAP App Center. An installer package is offered to make it even easier to get OpenRemote running on QNAP. It's been extensively tested by the communities of OpenRemote and QNAP.

The Turbo NAS supports features expansion by installing additional App Center apps developed and shared in the Linux open source community. The QNAP App Center incorporates numerous apps listed by categories, including business, content management system, communication, download, entertainment, utilities, and so forth. All the App Center apps can be installed and run right away with just one click.
